## MATCHVIEWER

- > TECHNICAL AND TACTICAL ANALYSIS
- > INTERACTIVE CONTENT
- > INDEPENDENT VALIDATION
- > CUSTOMISABLE AND FLEXIBLE

MATCHVIEWER provides a unique technical and tactical coaching tool using single camera footage and is the world's leading opposition scouting and post-match analysis system providing technical, tactical and video analysis all from a single camera source.

MATCHVIEWER is Prozone's most accessible, affordable and widely used product. It has continually been developed alongside leading coaches and managers who require performance analysis at away games (where PROZONE3 analysis is not possible) and for scouting opponents. MATCHVIEWER is now used for reflection and preparation at all levels within football from academy level to 1st team and throughout many professional, amateur and college/university teams.

## > TECHNICAL AND TACTICAL ANALYSIS

MATCHVIEWER provides video-enhanced technical and tactical performance insights. MATCHVIEWER has continually been developed by coaches for coaches. With the pressures of the modern game increasing every season, the need for comprehensive access to technical and tactical information is ever apparent.

MATCHVIEWER provides coaches, managers and analysts alike with the key data variables that can affect performance. Providing the ability to view in depth and interactive distribution maps, statistical tables and visual representations; MATCHVIEWER is now an essential part of the modern coaching cycle.

## > INTERACTIVE CONTENT

MATCHVIEWER is an interactive performance analysis tool with multiple layers of content. MATCHVIEWER provides management and coaching staff with a multi-layered, interactive coaching tool via a rich and engaging interface. It allows immediate video access to every single 'event' in the game (e.g. shots, passes, crosses, set pieces) and also allows you to look at performance data and visual representations (e.g. pass maps) for and against individual players, units within the team or the team as a whole. To maximise interactivity and effective usage, all data and maps are linked to the video so that the coaching team can view the analysis in the context of the game.

## > INDEPENDENT VALIDATION

Prozone are the only performance analysis company to have its performance analysis systems independently validated and these findings have been published in three published scientific journals. Subsequently MATCHVIEWER can be used to deliver objective and precise insights into both team and individual player performance.

## > CUSTOMISABLE AND FLEXIBLE

MATCHVIEWER is best used interactively and includes a selection of generic reports, including our unique player ratings tool in addition to the custom reports that can be created to fit the needs of coaching and management staff. MATCHVIEWER links seamlessly with the Prozone TREND to offer a more in-depth and time-phased analysis of key performance variables. Data and video can be imported into Prozone TREND to generate an invaluable database of performance information that is quick and easy to access.

We understand that 'real-time' analysis along with post-match analysis, are key components of the coaching process. So to assist with the transition between these, Prozone has enabled MATCHVIEWER to work alongside many other in-game application including SportsCode, Athletic Logic and Coaching Data.
